## Kinematic Evaluation

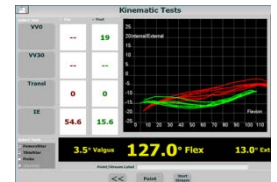

**Klee – Kinematic evaluation** is the unique software for surgical navigation developed for Knee Kinematic Evaluation. Prosthesis survivorship is strictly related to limb alignment and joint stability. Patient satisfaction and quality of life mostly depends on functional recovery. **Klee – Kinematic evaluation** provides an efficient and accurate way to measure those critical variables for an optimized surgical outcome.

### Main Technical Features:

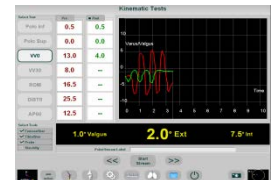

1

User friendly interface for a flexible and reliable system enabling the surgeon to configure which is the set of data and landmarks to be acquired, according to the clinical needs.

2

Graphical display of kinematic tests  
Comparison of pre and post operative kinematic data for each test.

3

File log creation with stream of coordinates for post processing in any type of format.

4

Perfect companion for research purposes or to control surgical outcomes.
