Unicompartmental knee arthroplasty

MONET - UKA is the Orthokey software, developed for Unicompartmental Knee Arthroplasty. Bone sparing and joint stability preservation are crucial aspects for a successful outcome. With few simple steps **MONET – UKA** guides the surgeon towards solutions that precisely fit patient's specific requirements.

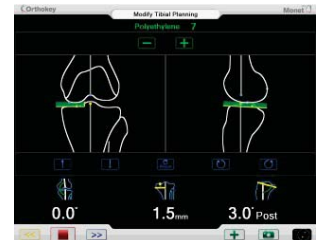

Main Technical Features:

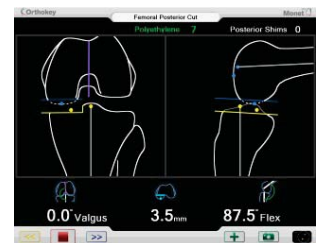

Implant planning based on preoperative limb deformity and on joint spaces balancing.

Accurate guidance for effective planning fine tuning and precise execution of bones resections. User friendly interface showing only relevant surgical information

Minimally invasive approach allowed

Reduced set of instruments compatible with any prosthesis instrumentation.
